

New Implant Technology

*Increase revenue,
predictability &
patient satisfaction!*

BROUGHT TO YOU BY CENTRIC LABORATORIES | 616.363.1550 | WWW.SMILESBYCENTRIC.COM

Guided Implant Surgery Advantages

- From single crowns to full arch restorations.
- Consistently excellent results.
- Precise treatment planning.
- Takes the guesswork out of implant placement.
- Template fabrication creates efficiencies, earn more in less time.
- Safer for patients, less risk for you.

Taking the Guesswork Out of Implants

New advances in implant technology have made it easier than ever for dentists to add this aspect of restorations to their practice with full confidence that they are doing what is best for the patient. 3-D cone beam imaging, combined with guided surgical stents and carefully crafted restorations have come together at Centric Laboratories with astounding results. Dentists who had previously been referring out implants are now keeping this revenue stream and offering their patients a more convenient option.

Centric Laboratories has partnered with Straumann

Cares Custom Abutments and collaborates with cone beam imaging centers and dentists to streamline the implant process. We have worked diligently to make this a service that you will want to add to your practice, or use to refine the process you already have in place.

As you get started, we will be with you every step of the way, helping you with the transition, which will be one of the easiest you've ever made. Once initiated, the process is efficient, accurate and delivers the highest quality results in minimal time.

GUIDED SURGERY PROCESS

Improved Patient Experience

One of the main benefits to adding guided surgery to your implant offerings is the advantage you are giving to your patients. Because this takes the guesswork out of implant placement, you are able to limit implant restorations to patients who are truly suitable candidates, provide optimal implant placement where there is the best bone structure and have confidence that you will not be interfering with the sinus cavity or nerves. Because of the higher safety profile this offers, patients also benefit from reduced

follow-up visits to treat problems that arise from poor implant placement.

Aside from the health benefits of this approach, there are aesthetic and practical ones too. This is typically a faster process and the best implant placement gives you an ideal foundation to provide optimal restorations. Your patients will appreciate the convenience of being able to stay in familiar surroundings for their implant and the reduced time frame for the actual treatment.

Centric Complimentary Support Services

- *Seminars & training.*
- *Study groups.*
- *Delivery.*
- *We work with all implant manufacturers.*
- *Resources to help you succeed.*

Better for Your Bottom Line

As dentists are looking for ways to improve their bottom line, keeping procedures in-house that had previously been sent to referral sources is an effective option. With dental implants becoming one of the hottest trends in the field, this is an obvious place to start. Centric Laboratories removes many of the barrier that had previously hindered dentists from providing dental implants.

With the addition of Straumann Guided Surgery, you'll benefit from:

- More control over the process with patients staying in-house.
- Added revenue from the addition of implant services.
- A more efficient process that requires less chair and planning time, while delivering better results.
